

User Story: Client Details Screen – Proclaim CRM

Title:

Client Details screen

As a

Case handler / Claims administrator

I want

to enter and view key client information including personal details, contact information, address, banking data, occupation, and any vulnerable person indicators

So that

I can maintain accurate, validated records and ensure the claims process is managed effectively, including special needs accommodations, driver payment setup, and client communication preferences.

Acceptance Criteria (Field-by-Field Breakdown):

1. Personal Information Section

Title, Forename, Surname:

Simple dropdown and text fields to capture the client's full name.

Date of Birth & Age:

Auto-calculate age when date of birth is entered.

NI Number (National Insurance):

Alphanumeric field with format validation.

Occupation:

Dropdown with predefined values (Private Hire Driver, Taxi Driver and others, on selection of others - text field will be shown)

Driver Code:

Alphanumeric field

Driver Base & Day/Night Driver:

Optional details to determine work pattern and assignment strategy.

2. Contact Information Section

Address Field:

Integrate Google Maps Autocomplete API to assist in address input.

As the user types, Google should suggest valid addresses.

On selecting a suggestion, full address is populated automatically.

Ensures address accuracy and reduces manual errors.

Postcode, Home Tel, Mobile Tel, Email:

Standard input fields.

Format validation for phone and email fields.

Language & Communication Preferences:

Dropdown for preferred language.

Checkbox for “Does the client speak clear English?”

Additional fields for entering an alternative contact person and their details.

3. Bank Information (Pay Driver CTA)

Sort Code, Account Number, Pay Notification Date:

Numeric input fields with validation.

Date selector for tracking when the driver was paid.

“Pay Driver” button to trigger internal payment workflow [Email will be sent to designated person with the CTA in the email that route a user to bank app [Lloyds Bank].

4. VAT & Registration

CI VAT Registered?:

Yes/No toggle to determine whether client is VAT registered for expense handling.

5. Vulnerable Persons Policy

Would You Class the Driver as Vulnerable?:

Dropdown (Yes/No).

Conditional display of “Why?” text field if marked as vulnerable.

“Notify Manager” button to trigger alert to a case supervisor [Via email].

On click to hyperlink Person Policy [policy of vulnerable people will be shown for the sake of user knowledge]

General Functional Requirements:**Update, Reset, Cancel Buttons:**

Standard save, undo and cancel operations with confirmation prompt.

Multi-user Access View:

Track who's viewing the file to prevent editing conflicts.

Audit Logging:

Every field update is tracked with user ID and timestamp.

Field Validation:

Required fields must be validated before saving.

Auto-format telephone numbers and postcode.

Performance:

Address lookup via Google Maps should not delay form loading.

Error Handling:

Graceful fallback if Google Maps API fails (manual entry allowed).
